

Exercise

- log into VirtualBox Ubuntu
- get flex_extract tarball
- untar with `tar -xvf flex_extract_v7.1.tar`
- *go to `flex_extract_v7.1/documentation/html` and open the `index.html` in a web browser*
- *follow the installation instructions*

Exercise

- go to the „run“ directory and study the „run.sh“ file
 - set the parameters in the parameter section
 - use online documentation:
flex_extract_v7.1/documentation/html/Documentation/Input
- select a CONTROL file from the „control“ directory and set it in the run.sh file.
 - if remote, gateway or local member mode: CONTROL_CERA
 - if local public mode: CONTROL_CERA.public
- type ./run.sh and wait for results
 - depending on application mode it might take a while
 - if using remote mode try using the **ecaccess-job-list** command
- if successfull , just play around and test other settings or data sets
